SUMMARY

Full-stack and systems engineer with 3+ years shipping real-time backends, multi-tenant SaaS platforms, distributed systems, and AI/RAG pipelines to production. Deep technical command across **.NET 10 (C#)**, **Flutter**, **Go**, and **TypeScript**. At **Kasb Platform**, engineered core financial ledger services in .NET 10 and spearheaded the Linux/Docker Swarm infrastructure migration. At **PetaProc**, engineered WebRTC media relay infrastructure (Go/pion), Elasticsearch search, and LanceDB AI orchestration.

TECHNICAL SKILLS

Languages: TypeScript, C#, Go, Dart, JavaScript, Python, SQL (PostgreSQL, SQL Server), Shell
Backend & Systems: .NET 10 / ASP.NET Core (EF Core, Kestrel), Node.js, NestJS, Elysia (Bun), Gin (Go), Microservices
Mobile & Frontend: Flutter + Riverpod (iOS, Android, Desktop), React Native, Next.js 15, SvelteKit (Svelte 5), Astro, React 19, Tailwind CSS
AI / ML & Vector: LanceDB, Qdrant, OpenRouter, LangChain, @xenova/transformers, Model Context Protocol (MCP), RAG
Cloud, Edge & DevOps: Cloudflare Workers, Docker, Docker Swarm, Linux, Caddy, NGINX, CI/CD, Asynq (Redis queue)
Databases & Cache: PostgreSQL + Prisma, SQL Server, Redis, SQLite, MinIO, AWS S3
Observability & Testing: OpenTelemetry (OTLP/gRPC), Sentry, Serilog + Grafana Loki, Jest, Vitest, Playwright

WORK EXPERIENCE

Kasb Platform — Backend & Systems Infrastructure Engineer Tehran, Iran · 2025 – Present
.NET 10 · C# 14 · ASP.NET Core · EF Core · SQL Server · PostgreSQL · Docker Swarm · Linux · Caddy · Syncfusion

- Architected core financial ledger and B2B commerce services in **.NET 10 / C# 14** with Entity Framework Core, resolving double-entry balance reconciliation discrepancies and enforcing transactional invariants.
- Spearheaded the Linux & containerization migration from legacy Windows/IIS to containerized **Docker Swarm** clusters, establishing isolated overlay networks (kasbNet), automated self-hosted CI runners, and zero-downtime Caddy edge SSL termination.
- Engineered a high-fidelity headless invoice and financial document rendering engine using Syncfusion Blink runtime on Linux containers, achieving 100% font rendering parity for RTL Persian financial invoices.
- Planned and established database modernization pathways from SQL Server to PostgreSQL, introducing EF Core multi-provider abstractions and migration validation test suites.
- Integrated backend APIs with cross-platform mobile client flows (Flutter / mobile APIs) for real-time inventory and checkout sync.

PetaProc — Full-Stack Engineer (Backend Focus) Tehran, Iran · Sep 2024 – Present
Go · Gin · Flutter (Riverpod) · WebRTC (pion) · NestJS · PostgreSQL · Redis · Elasticsearch · OpenTelemetry

- Developed a real-time voice/video backend in Go with WebRTC media relay (RTP/RTCP via pion) and WebSocket signaling; utilized Socket.io with Redis pub/sub adapter to support horizontal scaling across server instances.
- Instrumented distributed tracing with OpenTelemetry (OTLP/gRPC) and Sentry error monitoring, cutting mean time to identify production incidents by ~50%.
- Integrated async media processing with Asynq (Redis job queue) and MinIO object storage, processing media jobs with <2s queue-to-worker pickup at p95 under sustained load.
- Delivered cross-platform Flutter client (iOS/Android/Desktop) with Riverpod state management covering call UI, threaded replies, and file uploads; widget tests reached ~65% coverage.
- Maintained dual REST APIs (NestJS and Go/Gin) for collaboration platform; replaced PostgreSQL full-text search with Elasticsearch, cutting p95 search latency by ~70%.

Dorj Wallet — Back-End Developer Tehran, Iran · Apr 2024 – Aug 2024
NestJS · TypeScript · Ethers.js · Ledger SDK · Web3 · PostgreSQL · Prisma

- Built NestJS REST APIs for cryptocurrency platform using Ethers.js for on-chain interactions: wallet connection, transaction signing, and smart contract execution.
- Integrated Ledger hardware wallet SDK from scratch, enabling secure hardware-based transaction signing for end users.

FEATURED PROJECTS

AllCodex Ecosystem & AllKnower — *Bun, Elysia, LanceDB, OpenRouter, Next.js 15, MCP*

- Shipped AllKnower AI orchestration service on Bun/Elysia with RAG vector retrieval (LanceDB, local embeddings), multi-model LLM routing via OpenRouter, and MCP server integration; assembled AllCodex Portal with Next.js 15 App Router and SvelteKit.

AllTracker — Cross-Platform Telemetry Tracker — *Flutter, Riverpod, SQLite, Mobile SDK*

- Released a Flutter desktop and mobile habit and telemetry tracking app with system tray integration, Riverpod state management, and local offline-first SQLite storage.

AryaMehr Calendar — Zepp OS Smartwatch Engine — *TypeScript, Zepp OS Embedded SDK*

- Native Persian & Zoroastrian astronomical calendar, traditional Gahs, and solar prayer computation engine for Amazfit GTR 4 running Zepp OS.

EDUCATION

Bachelor's in Computer Engineering — Iran University of Industries, Tehran	2023 – Present
Diploma in Mathematics & Physics — Allameh Helli High School, Tehran · GPA: 17.86/20	2020 – 2023
